

My Form Editor

11/22/2023 10:29 am EST

We built the My Form Editor to allow you to easily describe your address form, field widths and required fields, then we apply our *Address Intelligence* to ensure addresses returned are compatible with these requirements.

Choose Settings in your integration and then choose the *My Form* tab.

You'll see an address form editor similar to the one below, which will default to your integration default country.

Country layout

 United States ▶

Address lines	Max characters	Required field?	Advanced settings	API field returned
Add +				
Line 1 Delete <input type="text" value="Street address, P.O. Box"/>	<input type="text" value="100"/>	<input type="checkbox"/>		AddressLine1
Line 2 Delete <input type="text" value="Flat, suite, unit, building, floor etc."/>	<input type="text" value="100"/>	<input type="checkbox"/>		AddressLine2
City <input type="text" value="Enter city"/>	<input type="text" value="100"/>	<input type="checkbox"/>		City
State <input type="text" value="Enter state"/>	<input type="text" value="100"/>	<input type="checkbox"/>		Region
ZIP Code <input type="text" value="Enter ZIP Code"/>	<input type="text" value="100"/>	<input type="checkbox"/>		Postcode

By default, the form is set up to have two address lines above City, Region and Postcode fields. You can add a separate Organization field and/or additional address lines.

Simply fill in the details of your requirements and we'll do the rest. We return an **address object** that is compliant with your address form, all mandatory fields completed, field widths respected (we abbreviate where possible before truncating).

In the case of the German example address below we've duplicated the City field into the Region field as German addresses do not include a Region/State.

type	lookup											
message	[+] message {}											
address	[-] address {}											
id	DE27600001051221											
language	de											
charset	Latn											
lines	[-] lines [1]											
	<table border="1"> <thead> <tr> <th></th> <th>key</th> <th>value</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>AddressLine1</td> <td>Hinterseer Straße 30</td> </tr> </tbody> </table>		key	value	1	AddressLine1	Hinterseer Straße 30					
	key	value										
1	AddressLine1	Hinterseer Straße 30										
city	[-] city {}											
	value Ramsau bei Berchtesgaden											
region	[-] region {}											
	value Ramsau bei Berchtesgaden											
postcode	[-] postcode {}											
	value 83486											
country	[-] country {}											
	<table border="1"> <tr> <td>language</td> <td>en</td> </tr> <tr> <td>value</td> <td>Germany</td> </tr> <tr> <td>iso</td> <td>DE</td> </tr> </table>	language	en	value	Germany	iso	DE

label	[-] label [3]											
	<table border="1"> <tr> <td>1</td> <td>1</td> <td>Hinterseer Straße 30</td> </tr> <tr> <td rowspan="2">2</td> <td>1</td> <td>83486</td> </tr> <tr> <td>2</td> <td>Ramsau bei Berchtesgaden</td> </tr> <tr> <td>3</td> <td>1</td> <td>GERMANY</td> </tr> </table>	1	1	Hinterseer Straße 30	2	1	83486	2	Ramsau bei Berchtesgaden	3	1	GERMANY
1	1	Hinterseer Straße 30										
2	1	83486										
	2	Ramsau bei Berchtesgaden										
3	1	GERMANY										
data	[+] data {}											
links	[+] links [2]											

We also return a **label object** that returns the address how it should optimally appear on an address label. If multiple elements are on one line, such as postcode and city on line 2 above, we return them as an array that you can use to create a single line with a space between the array elements.

For granular control, you can customize options for multiple countries. If you see a  option beside a field that means it has advanced settings. For example, for US addresses the Region field provides an option to return full state names rather than the default two letter abbreviation.

REGION - UNITED STATES

Use Full State Name

Cancel Save

These advanced options are available for a number of countries, just choose the country from the dropdown list.

Examples include:

- UK - Return the country name (England, Scotland, Wales, Northern Ireland) in the Region field.
 - Ireland - Remove the space from the Eircode (postcode).
-
