How do I get additional data for an address?
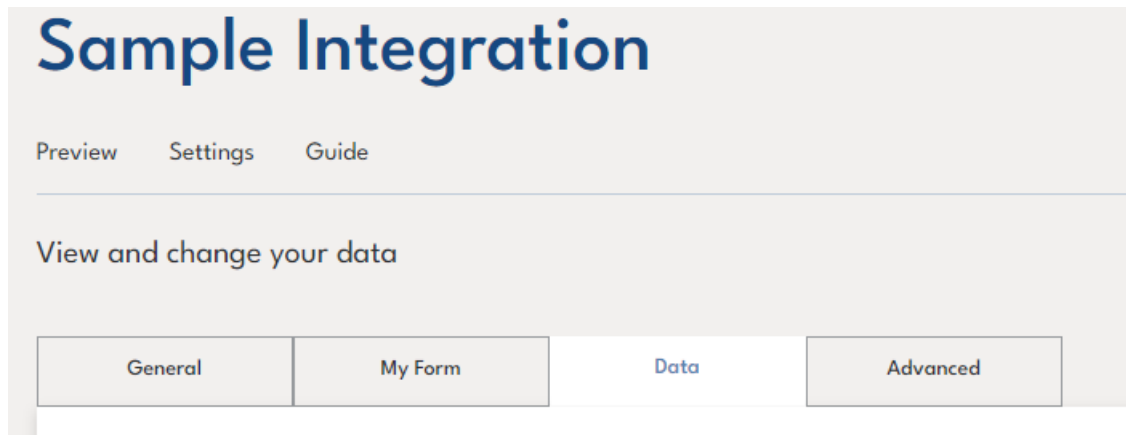

Geocodes are returned in the Lookup if you choose if from the Data tab in your integrations settings.

Toggle on the check-box for location, and any other data you want returned with the address.

Returned data ⓘ

Select your required data.

Name	Description		
location	Returns location data such as Latitude and Longitude	☑	⌄

```
▾ location:
    longitude: -6.272101
